COMMENT

Familial combined hyperlipidaemia: how can genetic disorders be common, complex and comprehensible?
A. Sniderman, S. D. Bailey and J. C. Engert (see accompanying paper pp. 375–381) 365–367
Published as Immediate Publication 4 July 2007, doi:10.1042/CS20070220

PAPERS

Assessment of orthostatic fluid shifts with strain gauge plethysmography
R. D. Thijs, M. Bruijnzeels, A. M. Kamper, A. D. van Dijk and J. G. van Dijk 369–374
Published as Immediate Publication 6 June 2007, doi:10.1042/CS20070060

Five-year follow-up of waist circumference, insulin and ALT levels in familial combined hyperlipidaemia
Published as Immediate Publication 12 June 2007, doi:10.1042/CS20070101

Relationship of waist and hip circumference with coagulation and fibrinolysis in postmenopausal women
Published as Immediate Publication 4 July 2007, doi:10.1042/CS20070084

CORRESPONDENCE

Global longitudinal strain by two-dimensional speckle tracking echocardiography is closely related to myocardial infarct size in chronic ischaemic heart disease
Z.-Z. Song 393
Published as Immediate Publication 4 June 2007, doi:10.1042/CS20070171

Global longitudinal strain by two-dimensional speckle tracking echocardiography is closely related to myocardial infarct size in chronic ischaemic heart disease: authors’ reply
O. Gjesdal and T. Edvardsen 394–395
Published as Immediate Publication 4 June 2007, doi:10.1042/CS20070177
